

UNIT TESTS

Unit Tests

1. Use Jest and React Testing Library (RTL)
2. Enzyme is being dropped by React
3. RTL encourages finding form elements by their label text eg **aria-label**

```
    return <input value={value} aria-label="cost-input" onChange={handleChange} />
  }

const setup = () => {
  const utils = render(<CostInput />)
  const input = utils.getByLabelText('cost-input')
```
