

Performance: memo,
useCallback, useMemo

Performance: memo, useCallback, useMemo – **only use if necessary, eg your app is running slow and you will a noticeable difference in load times**

- We will be talking about memo, useCallback, useMemo
- One important note to say is that you only should start using these tools if your app is lagging or having some performance issue
- Memo (higher order component)
- useCallback (hook)
- useMemo (hook)
