connect(mapStateToProps)(yourComponent);

```
🐡 ExpenseFiller.js 🗙
src > components > ExpensifyList > @ ExpenseFilter.is > [69] default
       import React from "react";
       import { connect } from "react-redux";
       import { setText } from "../../Redux/actions/expenseFilters";
       function ExpenseFilter({ filters, dispatch }) {
           return (
                        type-"text"
                        placeholder-"filter by name..."
                        volue={filters.text}
                        onChange=\{(e) \Rightarrow \{
                            dispatch(setText(e.target.value));
                        className="border-2 border-indigo-600 rounded py 2 px 3 text-gray-700 leading-tight my-4"
               </div>
       const mapStateToProps = (state) -> {
                filters: state.filters,
       export default connect(mapStateToProps)(ExpenseFilter);
```

Redux

useSelector() hook

Another way is to use the useSelector hook from 'react-redux', it Works like a callback and returns your state as an object which you return by accessing its key name.

```
import { useSelector } from "react-redux";
const myState = useSelector((state) => state.yourReducer name);
```
