Connect the Redux state to your component:

There are several ways to connect your Redux state to your component, I will cover two ways.

1. connect(mapStateToProps)(yourComponent); - old way but still ok
2. useSelector(state => state.yourStateName) – modern up to date way

Cognizant

Redux

connect(mapStateToProps)(yourComponent);

You can use the connect() higher order component method, it accepts two arguments:
mapStateToProps and the component you want to connect it with.

After this, your state are accessed via props from the component you passed in
